

Michael Greifeneder

OSGi

The Next Generation Java Service Platform

SOA - The Java Way
or
My classpath is killing me

Bilder von Peter Kriens "W-JAX Keynote 2007" und
Neil Bartletts "Getting Started with OSGi"

Inhalt

- Problem
- OSGi
- SOA
- Tools

A photograph of three people crouching in a long, dark tunnel. The tunnel walls are made of concrete and are illuminated by a series of small, square lights along the ceiling. A bright light source is visible at the far end of the tunnel, creating a strong glow and casting long shadows. The overall atmosphere is mysterious and dramatic.

Warum OSGi?

The Humble JAR File

Typical Java Application

JAR

HELL

spring

hibernate

log4j

commons-logging

mail

activation

ldap

My JAR 1

My JAR 2

```
javax.sql.DataSource
java.rmi.RemoteException
java.security.Principal
java.sql.ResultSet
java.sql.SQLException
java.sql.Types
org.bar.foo.Flibble
javax.ejb.EJBException
javax.ejb.SessionBean
javax.ejb.SessionContext
javax.naming.Context
javax.naming.InitialContext
javax.naming.NamingException
com.sun.internal.DontUseThisClass
javax.sql.DataSource
org...jdbc.core.JdbcTemplate
org...jdbc.core.PreparedStatementCreator
org...jdbc.core.RowMapper
org...jdbc.core.SqlParameter
org...jdbc.support.GeneratedKeyHolder
com.foo.bar.Wibble
java.security.Principal
javax.sql.DataSource
java.rmi.RemoteException
java.security.Principal
java.sql.ResultSet
java.sql.SQLException
java.sql.Types
java.util.List
javax.ejb.EJBException
javax.ejb.SessionBean
javax.ejb.SessionContext
javax.naming.Context
com.sun.internal.DontUseThisClass
com.foo.bar.Wibble
org.bar.foo.Flibble
javax.naming.InitialContext
javax.naming.NamingException
javax.sql.DataSource
org...jdbc.core.JdbcTemplate
org...jdbc.core.PreparedStatementCreator
```

com.foo.bar.Wibble?

```
javax.sql.DataSource
java.rmi.RemoteException
java.security.Principal
java.sql.ResultSet
java.sql.SQLException
java.sql.Types
org.bar.foo.Flibble
javax.ejb.EJBException
javax.ejb.SessionBean
javax.ejb.SessionContext
javax.naming.Context
javax.naming.InitialContext
javax.naming.NamingException
com.sun.internal.DontUseThisClass
javax.sql.DataSource
org...jdbc.core.JdbcTemplate
org...jdbc.core.PreparedStatementCreator
org...jdbc.core.RowMapper
org...jdbc.core.SqlParameter
org...jdbc.support.GeneratedKeyHolder
com.foo.bar.Wibble
java.security.Principal
javax.sql.DataSource
java.rmi.RemoteException
java.security.Principal
java.sql.ResultSet
java.sql.SQLException
java.sql.Types
java.util.List
javax.ejb.EJBException
javax.ejb.SessionBean
javax.ejb.SessionContext
javax.naming.Context
com.sun.internal.DontUseThisClass
com.foo.bar.Wibble
org.bar.foo.Flibble
javax.naming.InitialContext
javax.naming.NamingException
javax.sql.DataSource
org...jdbc.core.JdbcTemplate
org...jdbc.core.PreparedStatementCreator
```

com.foo.bar.Wibble?

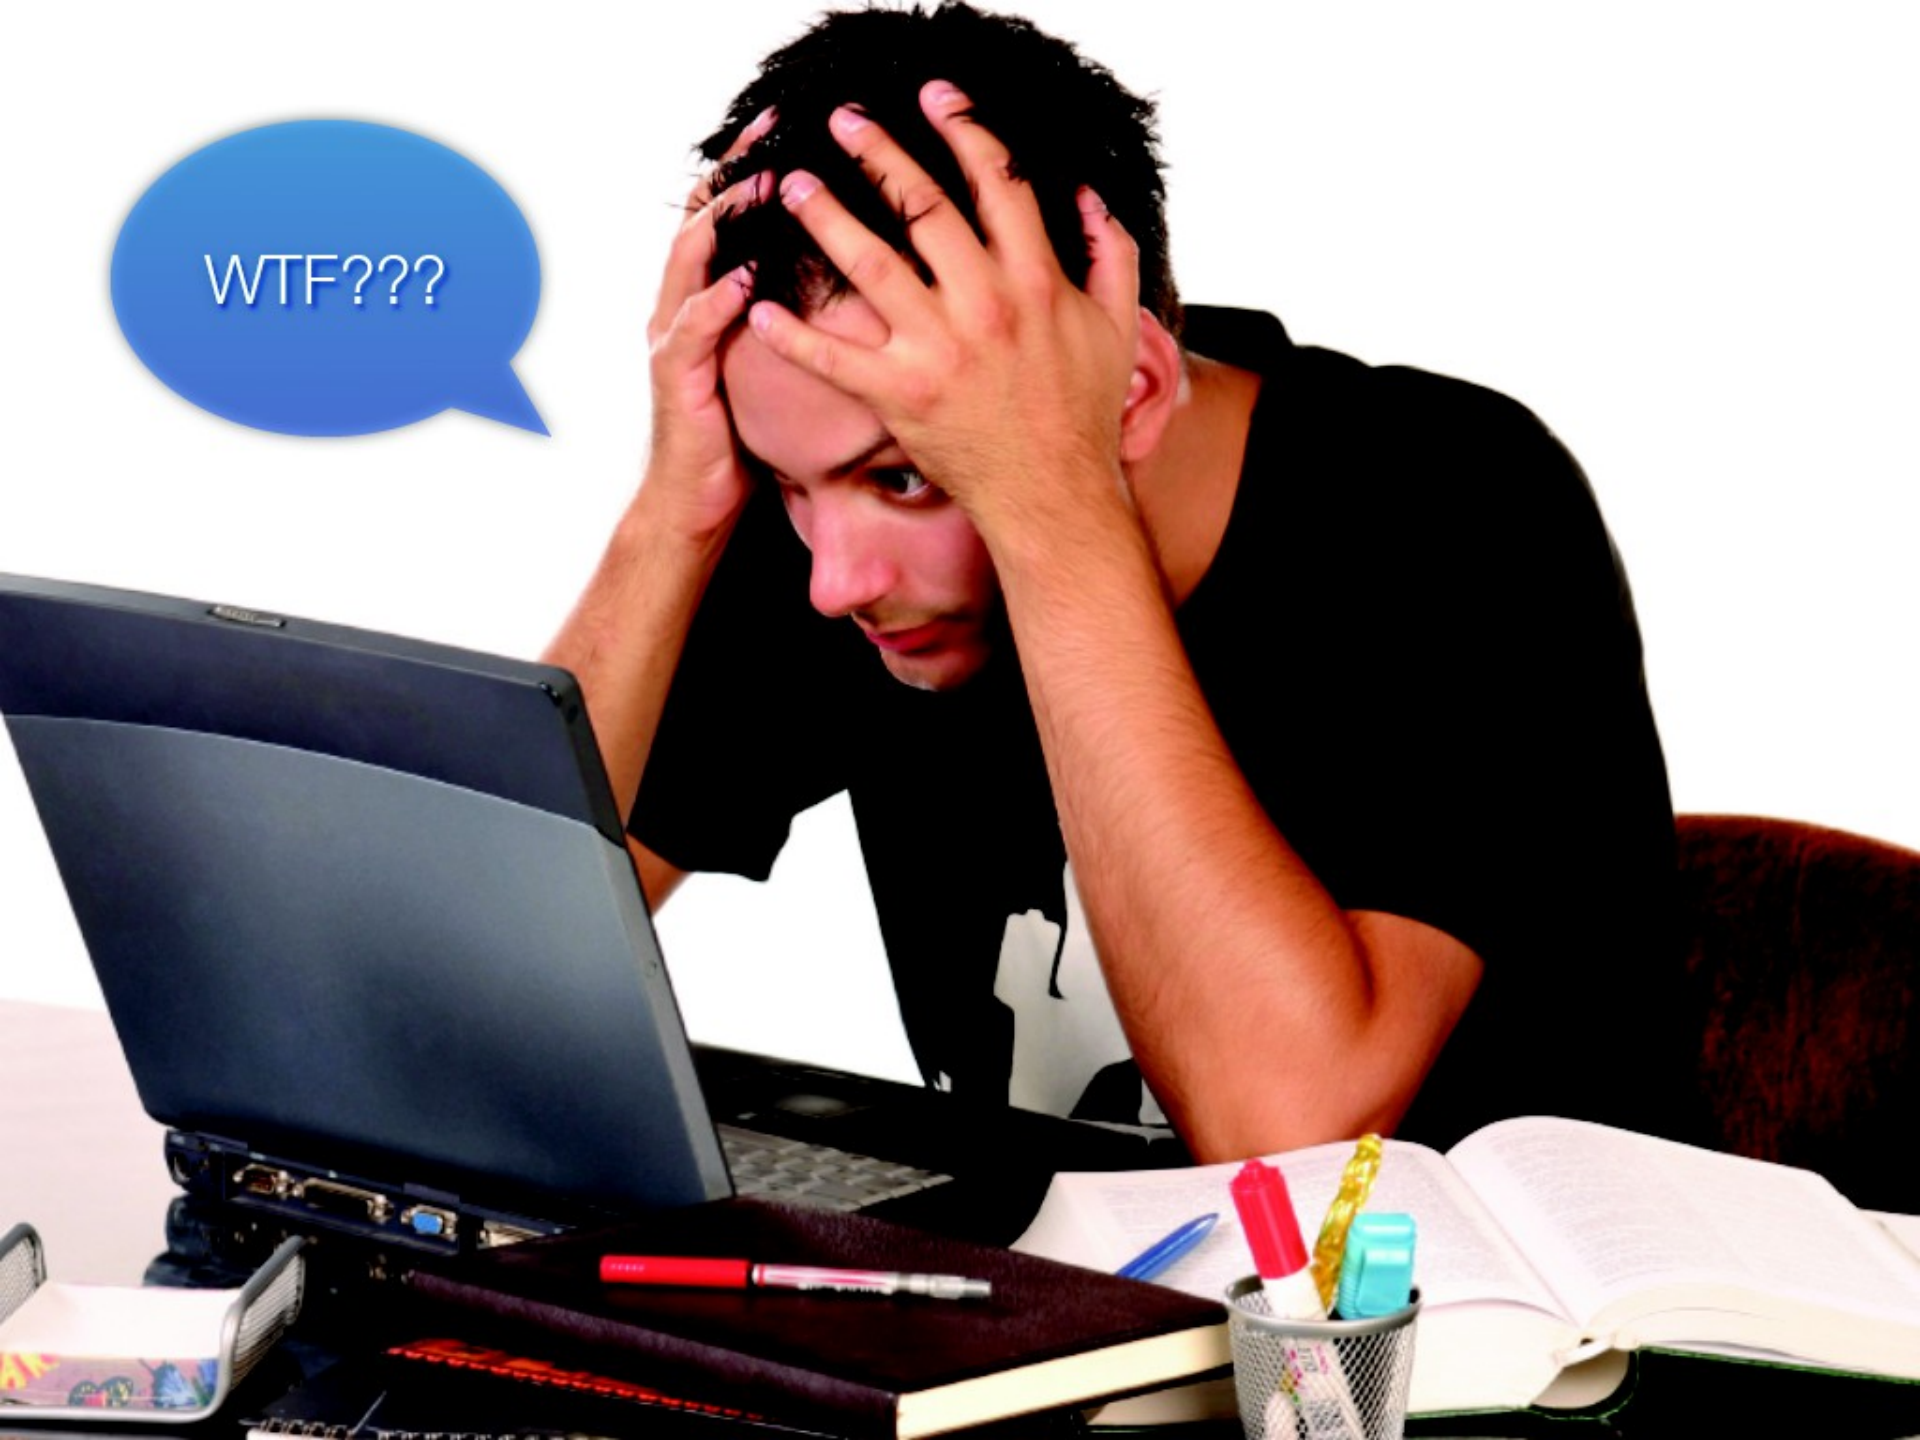

Im besten Fall:

```
mike@aphrodite:~/tmp/screenshot$ java org.bar.foo.Flibble
Exception in thread "main" java.lang.NoSuchMethodError: com.foo.bar.Wibble.start()V
    at org.bar.foo.Flibble.main(Flibble.java:7)
mike@aphrodite:~/tmp/screenshot$ █
```

Aber auch dieses Verhalten möglich:

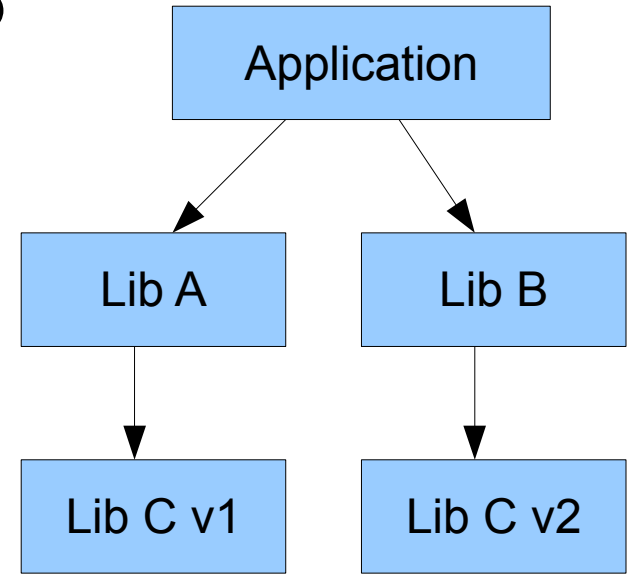

```
mike@aphrodite:~/tmp/screenshot$ java org.bar.foo.Flibble
Now doing something completely different...HA!!!
mike@aphrodite:~/tmp/screenshot$ █
```

WTF???

Was fehlt?

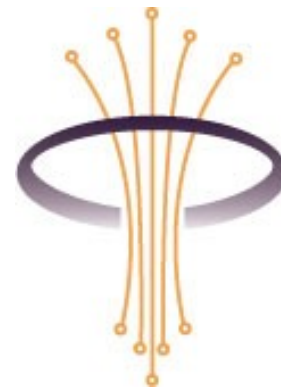

- Sinnvoller Name für Jar
- Version
- Abhängigkeiten
- Verstecken von internen Klassen
- Late Binding, Dynamics

OSGi

- Ursprünglich “Open Service Gateway Initiative” für Embedded Systems
- Heute: Dynamic Module System For Java
- Eclipse basiert seit Version 3.0 auf OSGi.
- OSGi Alliance definiert Spezifikation seit '99
 - Mitglieder: Nokia, IBM,...
 - Aktuelles Release 4.1

<http://www.osgi.org>

OSGi™
Alliance

Implementierungen

- Equinox

- Unterbau für Eclipse, Common Public License
<http://www.eclipse.org/equinox/>

- Apache Felix

- Apache License, <http://felix.apache.org>

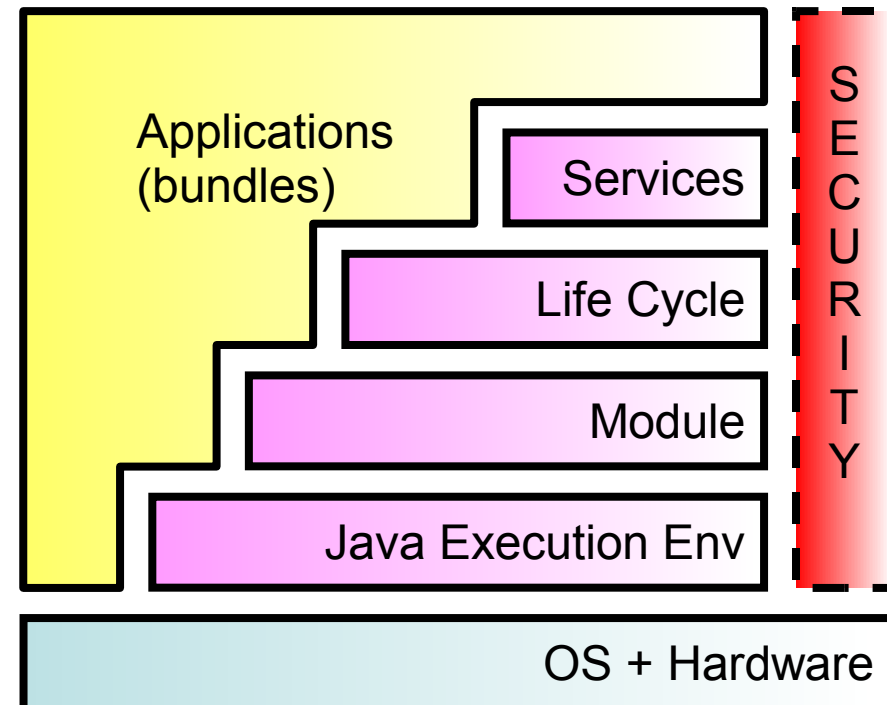

- Makewave Knopflerfish

- BSD style license, <http://www.knopflerfish.org/>
- GUI und Web-Console

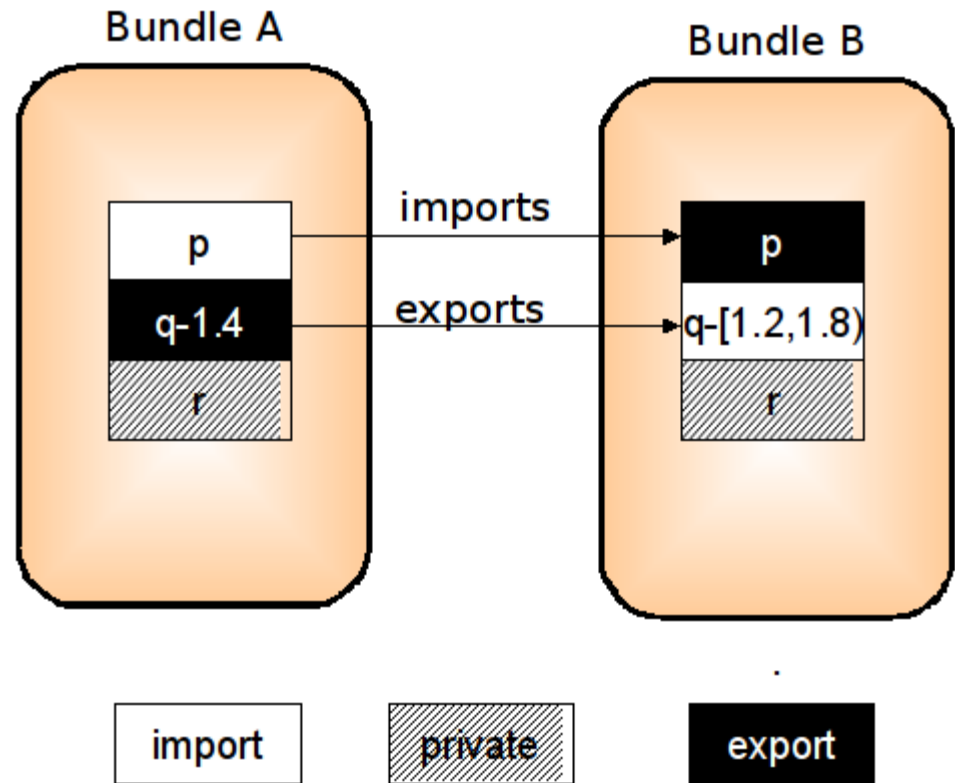

Framework

- L0: Execution Environment
 - Profile definieren Minimum: Mobile, J2SE, EE
- L1: Modules
- L2: Life Cycle Management
- L3: Service Registry

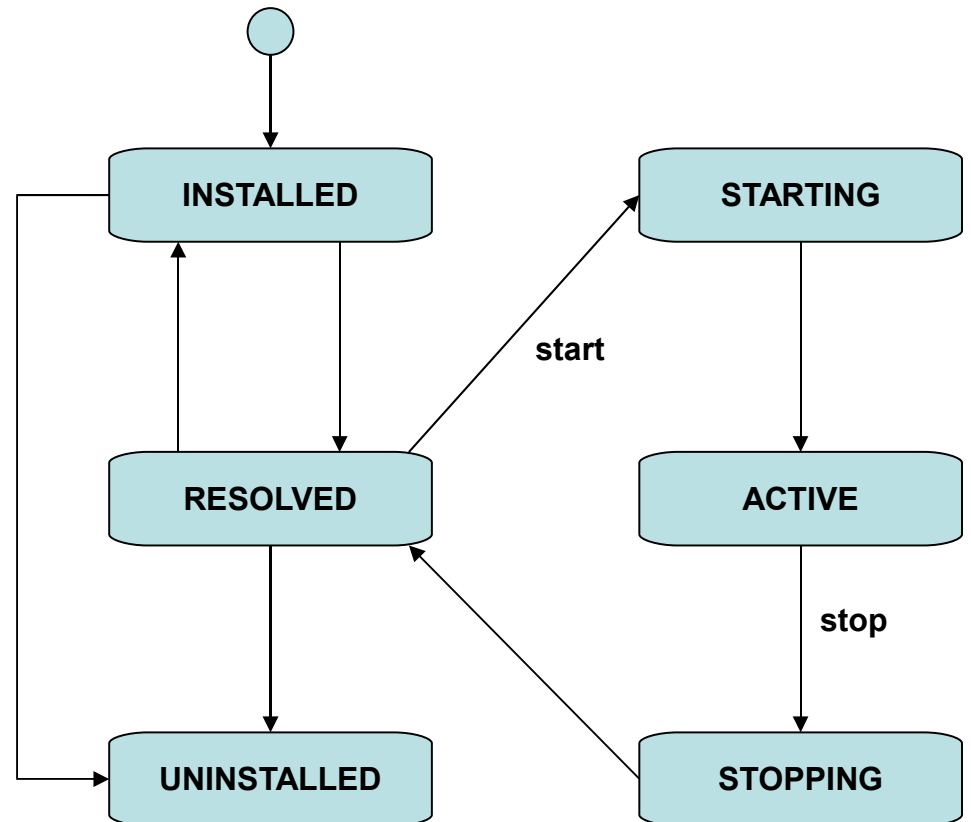

Modules

- Modularisierung durch Bundles
- Eigene Classloader
- Schutz von Packages
- Versionierung

Lifecycle

- Jedes Bundle hat Lifecycle
- Bundle Manager ist Teil der Spezifikation

Metadaten

- META-INF/MANIFEST.MF
 - Bundle-Name: test.movieservice
Bundle-SymbolicName: test.movieservice
 - Bundle-Version: 1.0.0.SNAPSHOT
 - Export-Package: test.movieservice
 - Import-Package: test.dto
 - BundleActivator:
test.movieservice.BundleActivator

18 6/resolved RemoteFW-API
19 6/active Desktop
  
```

Probleme

- Jars müssen angepasst werden
 - Metadaten
- Libraries, die eigene Classloader verwenden
 - z.B.: Hibernate
- Dynamik der Bundles und Services schwerer zu handhaben

Services - SOA?

- “SOA ist doch was mit Webservices, oder?”

SOA mit Webservices und XML

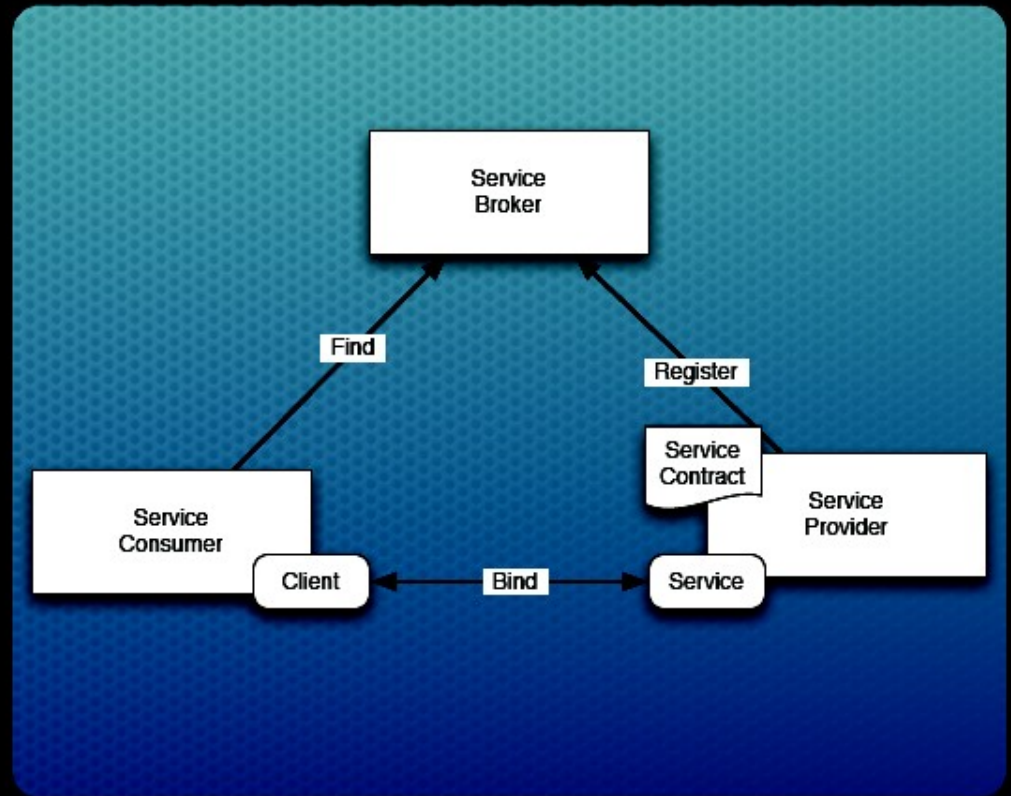

Services - SOA?

- Webservices bieten Dienste im Netz an und greifen über das Netz auf andere Services zurück.
XML dient als Lingua Franca zwischen verschiedenen Plattformen
- Die OSGi Service Platform stellt Services innerhalb einer Java VM zur Verfügung

SOA for the JVM

- Broker = OSGi Service Registry
- Service = Java Object
- Client = Java Object
- Contract = Interface

Services

- System Services
 - Log Service, Preferences Service, Configuration Admin Service, User Admin Service, ...
- Protocol Services
 - HTTP Service , UPnP Service, ...
- Other
 - XML Parser Service, ...

Services

- Manuelle Registrierung

```
class X implements BundleActivator {  
    public void start(BundleContext context) {  
        DbService s = new MyDbService();  
        context.registerService(  
            DbService.class.getName(), s);  
    }  
}
```

Services

- Manuelle Verwendung

```
ServiceReference ref =  
    context.getServiceReference(  
        DbService.class.getName());  
if (ref != null) {  
    DbService s = context.lookup(ref);  
    if (s != null) {  
        s.callDbService();  
    }  
}
```

- Flexibel, aber mühsam

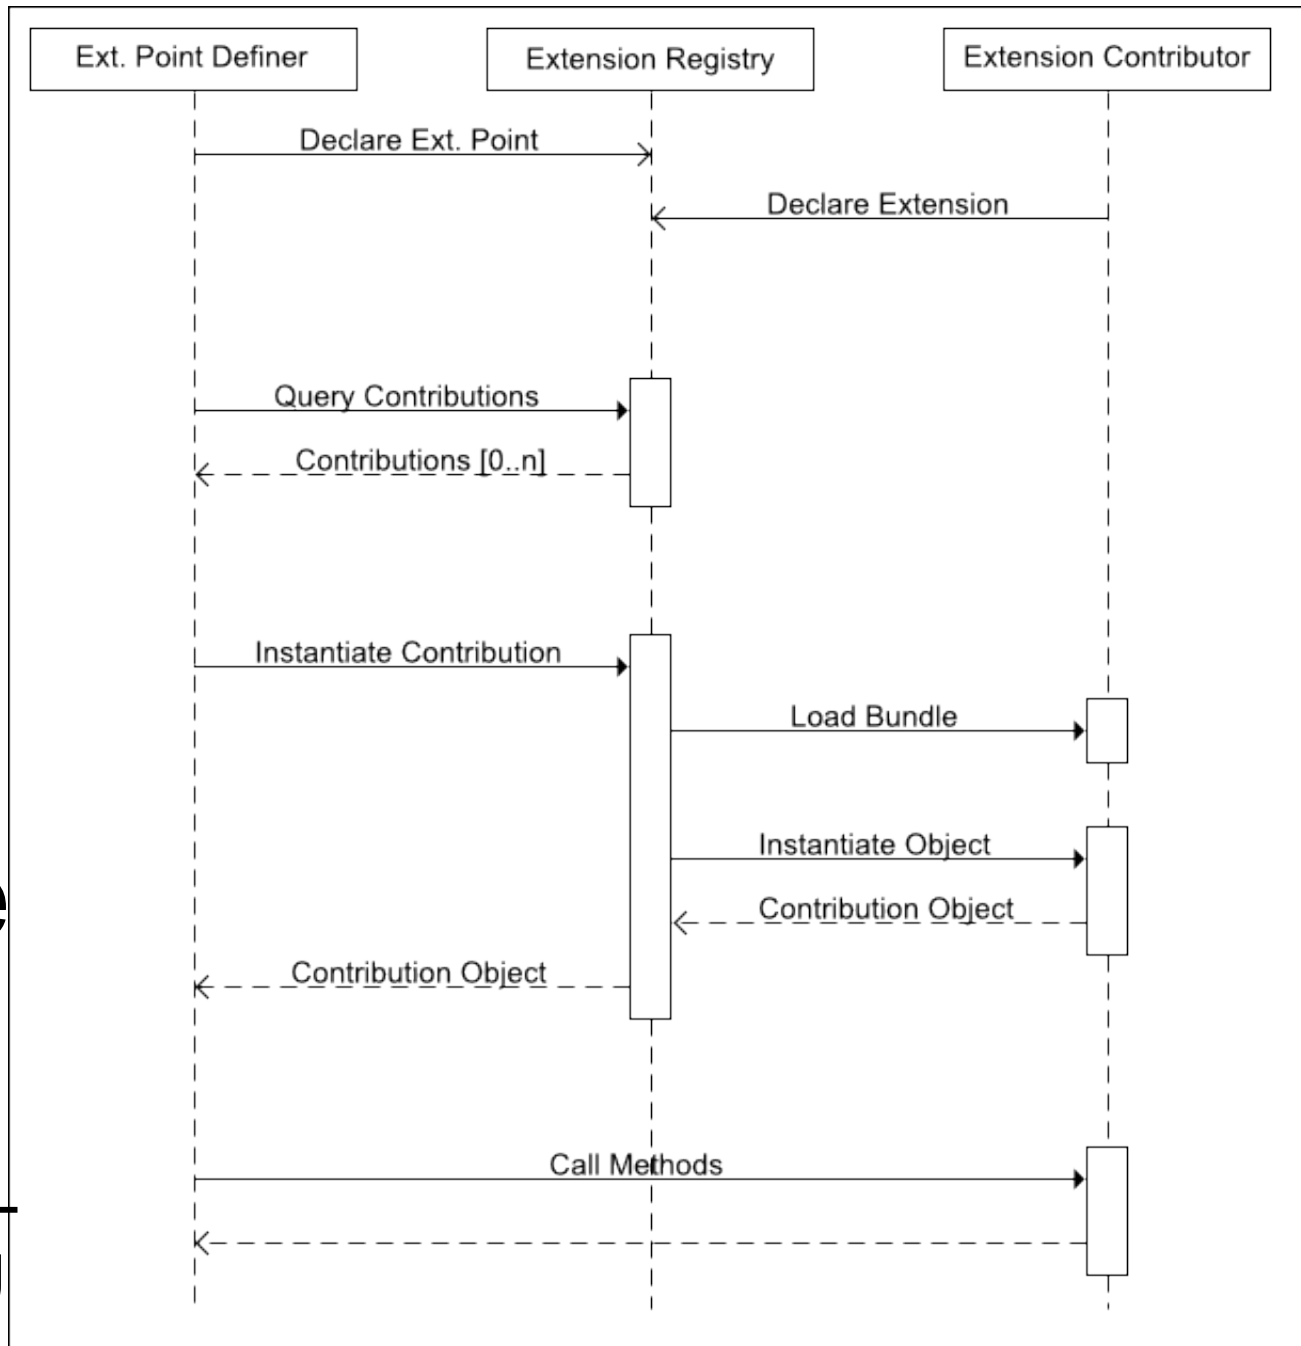

Equinox-Extensions

- Extensions sind Deklarationen
- Lazy Loading
- z.B. Menüpunkte

Declarative Services

- Deklaration in XML
- Kein Lazy Loading

Spring Dynamic Modules

for OSGi(tm) Service Platforms

- Wie Spring Framework unter Apache Lizenz
- Spring konfiguriert Anwendungen und kümmert sich um
 - Injektion und Deklaration von Services
 - Transaktionen
 - Logging
 - Datenbankabstraktion

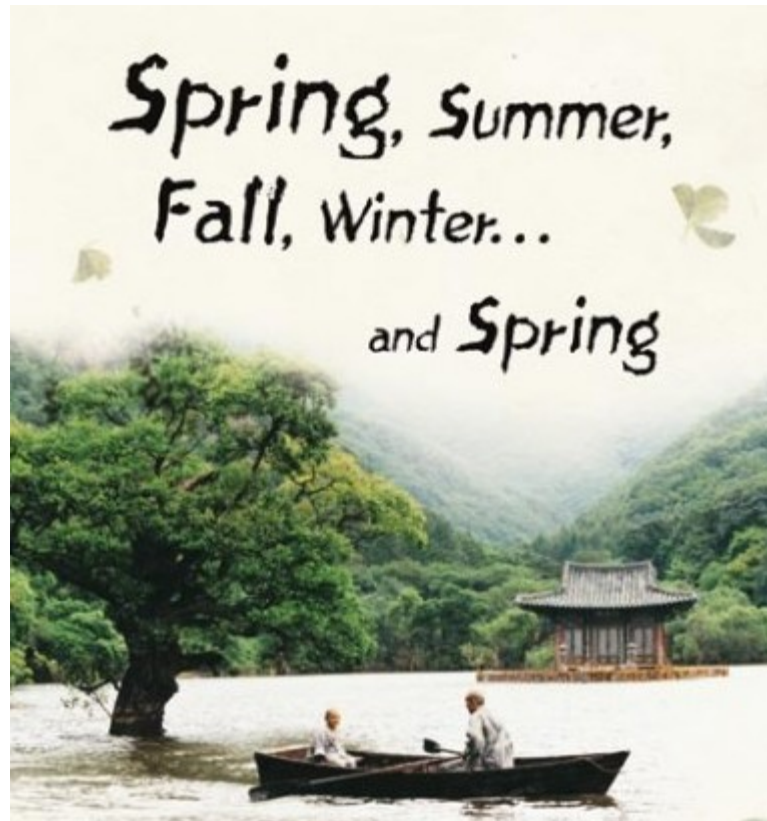

Spring DM

- META-INF/spring/*-context.xml
- `<osgi:reference id="db4oOsgiService" interface="com.db4o.osgi.Db4oService"/>`
- `<bean name="MovieServiceDb4o" class="test.movieservice.db4o.MovieServiceImpl" init-method="start" destroy-method="stop">
 <property name="db4oService" ref="db4oOsgiService"></property>
</bean>`
- `<osgi:service id="db4oMovieService" ref="MovieServiceDb4o" interface="test.movieservice.MovieService">
</osgi:service>`

PAX

- Projekte von OPS4J
- Pax-Construct:
 - Maven Plugins zum Erstellen, Builden, Verwalten und Deployen von OSGI Komponenten. Eclipse-Konfiguration
 - Verwendet Bnd - Bundle Tool
- Pax-runner
 - Erleichtert das Testen mit mehrere Implementierungen: Equinox, Felix,...
- Pax-Logging,...

again...

SpringSource Application Server

- Basiert auf OSGI. Verwendet Equinox als Unterbau.
- Alle Komponenten des Spring-Frameworks sind bereits OSGI-ready
- Basiert auf Spring Dynamic Modules
- Erweiterungen für Webentwicklung
 - Bietet spezielles Bundle-Repository
 - Deploymenthilfen (zB War File oder PAR)
- Lizenziert unter GPL

Summary

- Modularität
- Versionierung
- Dynamik
- Services
 - Spring DM
 - Equinox Extensions
- Achtung bei noch nicht OSGi-ready Bibliotheken

ENDE

Danke für die Aufmerksamkeit!
